(a) B-spline assignment order
E_Γ
order p
uniform
moderate
strong
baseline ($s = 6$, $M = 80$, $p = 9$)
moderate ($s = 4$, $M = 40$, $p = 7$)
reference floor
(b) Density
density ρ ($L = (N/\rho)^{1/3}$)
(c) Screening
screening κ ($c = 1$)
(d) Matrix-free action by probe class
$\|(\Gamma_h - \Gamma_{ref})X\|/\|\Gamma_{ref}X\|$
Gaussian X (10 vectors)
3 slowest eigenvectors
fastest eigenvector
$s_R = \xi r_c$ ($s_F = 6$, $M = 80$, $p = 9$)
